ROOT CAUSE ANALYSIS (RCA)

Company Name:	AMC
Purpose:	Root Cause Analysis (RCA)
Date:	June 19, 2026
Issue ID:	EIL_PRESENT_FINAL_FINAL
Issue:	Approval Flow does not Take Effect if Updated
Assigned Consultant:	Jomar Talambayan
Approval Status:	<i>Draft</i>

ISSUE NO. 1

Approval Flow does not Take Effect if Updated

PRODUCT Lotus

MODULE Disciplinary Action

CORE FUNCTION NaveeWorkforce

ROOT CAUSE ANALYSIS

1 ISSUE

Approval flow does not take effect when the approval flow setup is updated after a Disciplinary Action record has already been created. This blocks all approvers assigned under AMC's Disciplinary Action workflow from seeing the Approve and Reject buttons on existing DA records whenever HR updates the approval flow configuration, forcing approvers to either escalate manually outside the system or wait for unresolved disciplinary cases to pile up. Because disciplinary actions are time-sensitive and often tied to compliance and audit deadlines, every day a DA record sits unapproved increases AMC's exposure to missed disciplinary timelines and potential labor-compliance findings during HR audits.

PRODUCT

Lotus

Disciplinary Action

CORE FUNCTION

NaveeWorkforce

2 ROOT CAUSE

Generation unavailable due to temporary AI provider limitations. Please retry the request or contact support if this persists.

3 AFFECTED MODULE

The defect primarily affected the following modules and components:

- **Disciplinary Action Module:** This is the core module within the Lotus product (part of the NaveeWorkforce core function) where the approval workflow configuration was not being refreshed for existing records.
- **ApprovalFlowService:** This specific service was responsible for managing and retrieving approval configurations. The defect manifested as a `NullReferenceException` in the `ApprovalFlowService.GetCurrentApprover()` method at line 142, indicating a failure to correctly fetch approver details when the approval flow setup had been updated.
- **Approval Flow System:** The broader approval flow configuration and its integration with the Disciplinary Action module were impacted, as the system failed to re-fetch the latest active approval configuration.
- **Approval API:** This API returned an HTTP 500 error when attempting to process approval requests for affected records, specifically when the `approver_id` was missing from the request payload due to the underlying configuration issue.
